

# BiOWiSH™ Septic Tank Maintenance

## Maintaining Your Septic System Helps Prevent Pump-Outs

### What is BiOWiSH™ Septic Tank Maintenance?

Septic Tank Maintenance is a microbial-based septic tank treatment that helps you take proper care of your septic system. Keep your septic system hassle-free and avoid costly pump-outs by using BiOWiSH™ Septic Tank Maintenance at regular quarterly intervals.

Proper use involves only a few minutes every 3 months to save money and significantly prolong the life of your septic system.

One dose of BiOWiSH™ Septic Tank Maintenance helps prevent back-ups for 3 months and ensures that the all-natural microbial system is working effectively.

### Benefits

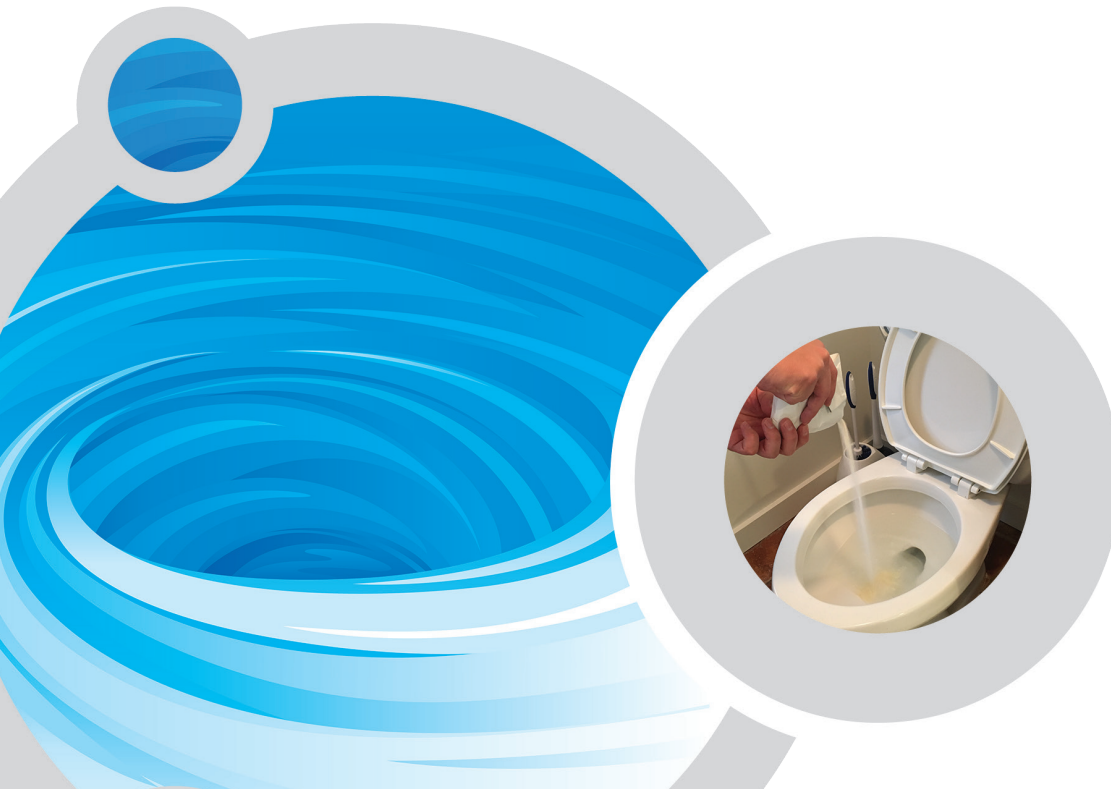

- Digests solids and reduces the need to pump out
- Treats up to a 2,500 gallon tank or up to 4 bathrooms
- Safe for all plumbing and piping
- Rapidly removes odors
- Boosts system for heavy loads or after long periods of inactivity
- 100% natural and non-toxic

### How does BiOWiSH™ Septic Tank Maintenance Work?

Septic Tank Maintenance is powered by BiOWiSH™, a revolutionary technology used in sewage treatment plants to rapidly digest organic waste and eliminate odor causing compounds.

Generally, septic tanks require pump-outs every 3 to 5 years. However, regular use of BiOWiSH™ Septic Tank Maintenance together with proper system use can eliminate the need for pump-outs.

Local ordinances may require you to perform scheduled pump-outs of your system. Please check with your local authorities for more information.

# BiOWiSH™ Septic Tank Maintenance

## Simple Treatment

1. Open packet, pour contents into toilet bowl and flush. For best performance apply after final use of toilet at night.
2. Do not use disinfectant cleaners on toilet bowl prior to dosing or for 48 hours after dosing.
3. Repeat treatment every 3 months.

## 3 Key Tips

### Use Water Efficiently

The more water a household conserves, the less water enters the septic system. Efficient water use can improve the operation of the septic system and reduce the risk of failure.

### Watch Your Drains

Do not flush kitchen and bathroom items that can clog and potentially damage the septic system. Always use Septic Safe cleaning products and avoid excess use of bleaches and disinfectant products. This can destroy the biological treatment taking place in the system or might contaminate surface waters and groundwater.

### Use High Efficiency Fixtures

Faucet aerators help reduce water use and the volume of water entering your septic system. High-efficiency showerheads or shower flow restrictors also reduce water use.

## All New Packaging - Same Great Product!

One dose: 3.5 oz./100g pack

**BiOWiSH™ TECHNOLOGIES**

**SEPTIC TANK MAINTENANCE**

**POWERFUL BIOTECHNOLOGY**  
BACKED BY INDEPENDENT RESEARCH DATA

**BREAKS DOWN:**

- ▶ Odor
- ▶ Solid waste & paper
- ▶ Fats, oils & grease

**SCIENTIFICALLY PROVEN TO treat your tank for 3 months!**  
\*see back panel

**For failing/failed systems, use Septic Rescue**

Suitable for all septic systems.  
Treats up to 2,500 gallon tanks.

**OPERATES IN BOTH SEPTIC TANK AND LEACH FIELD**  
**REDUCES THE NEED FOR COSTLY PUMP-OUTS**
