

BiOWiSH™ Manure & Odor: Beef & Dairy for Composting

Beef and Dairy Composting

BiOWiSH™ Manure & Odor Treatment is a powerful blend of natural biocatalysts that works effectively in compost production. This product is recommended for composting of all organic materials and operations.

How Will I Know BiOWiSH™ Manure & Odor is Working?

BiOWiSH™ Manure & Odor Treatment provides visual, smell, and laboratory evidence of a mature finished compost at a much faster rate.

Benefits

- Decreases composting time
- Increases throughput and reduces operational costs
- Improves quality and health of compost
- Increases nutrient availability in final product
- Reduces odor rapidly

Dosing Recommendations

The use of BiOWiSH™ Manure & Odor in composting operations is applied as the compost pile is being constructed and may be applied each time the compost pile is mixed or when the temperature of the pile falls below 55°C.

Add 20g to 40g of BiOWiSH™ Manure & Odor: Beef & Dairy into a minimum of 10L of water to cover the surface area of 1 tonne of compost pile. The amount of water added should not cause the moisture of the pile to exceed 60%. Wait for a minimum of 30 minutes to a maximum of 12 hours before applying the mixture to the compost pile. Spray the mixture onto the pile while constructing or mixing the pile.

The recommended amount of BiOWiSH™ Manure & Odor: Beef & Dairy, as directed above is for each tonne of dairy compost. However, beef and dairy operations differ greatly in the types of manure components due to feeding programs, waste handling, and other management practices. For site specific dosing protocols please refer to our composting guide at biowishtech.com/animal-agriculture/ to access our composting calculator, and contact your local BiOWiSH distributor or email animalag@biowishtech.com.

BiOWiSH™ Manure & Odor: Beef & Dairy is non-toxic and safe for everyday use. To download Safety Data Sheets, and Hazards or First Aid Information, go to biowishtech.com/sds.
