

BiOWiSH™ MultiBio 3PS On-Farm Coating Process

LOW DENSITY, FLOATING PELLETTED FEEDS FOR AQUACULTURE

Please use the following instructions for on-farm spray coating of BiOWiSH™ MultiBio 3PS onto low density, floating compound pelleted feeds for aquaculture. Please refer to species-specific user guides for recommended BiOWiSH™ MultiBio 3PS dosages.

EQUIPMENT

- a. Tarp
- b. Rake or hoe
- c. Measuring scoop
- d. Hand held sprayer
- e. Optional Process Equipment: Large mixer (holds a minimum of 50kg of feed)

INGREDIENTS

- a. BiOWiSH™ MultiBio 3PS
- b. Feed pellets (50 kg example in this User Guide).
- c. Water

PROCESS

1. Spread the tarp on the ground.
2. Using a rake or hoe, evenly spread the feed over the tarp.
3. For 50 kg of feed, use the measuring scoop to measure out 10 grams of BiOWiSH™ MultiBio 3PS.
4. Add 600 milliliters of water plus the 10g of BiOWiSH™ to the hand held sprayer and mix by shaking or stirring for 2 minutes or until all the 3PS is dissolved.
5. Spray coat the feed with a sweeping motion over the top of the feed bed, in an area with a barrier to the wind to prevent drafting of the spray mist. During the spray coating process be sure to turn the feed bed over with the rake as many times as possible but at least 4 times. Make sure to exhaust the full contents of the sprayer onto the feed bed.
6. *Optional Process: Place the feed into the mixer and begin to rotate the feed. With the feed rotating, spray with the water and BiOWiSH™ MultiBio 3PS mixture. Continue spraying until the recommended volume of water + BiOWiSH™ MultiBio 3PS has been applied. For every kg of feed use 12 milliliters of water and 0.2 grams of BiOWiSH™ MultiBio 3PS. Mix the coated feed for at least 2 more minutes after all the coating solution has been applied.*

NOTES

After coating, store the coated feed and the reclosed packaged of BiOWiSH™ MultiBio 3PS in a cool, dry location out of direct sunlight until ready to use. Storage above 40°C (104°F) for extended periods is not recommended.
